

Privacy Policy — TaxiGo

Last updated: August 26, 2026

1. Introduction

This Privacy Policy explains how the **TaxiGo** mobile application handles information used as part of its operation.

TaxiGo is an application designed to help taxi drivers manage their daily activities, including rides, workdays, earnings, statistics, and reports.

We take privacy seriously. This policy explains what information may be processed, how it is used, where it is stored, when it may be shared, and how users can delete their data.

2. Data Controller and Contact

Application: TaxiGo

Developer: Ibrahim Diawara

For any questions regarding privacy, personal data, or this Privacy Policy, you can contact us at:

Email: ibrahim.y.diawara@gmail.com

3. Account Creation

TaxiGo does not currently require users to create an account.

The application does not require a username, password, or TaxiGo account to use its main features.

TaxiGo does not currently create or maintain a user account on its own servers.

4. Information Stored in the Application

Depending on the features used, TaxiGo may allow users to store the following information.

Driver Information

Users may choose to enter:

- their name or display name;
- their taxi license number or identifier;
- an email address used for report-related features;
- their preferred currency.

This information is used only for the corresponding features of the application.

Ride Information

Users may record:

- ride date;
- ride time;
- fare amount;
- selected payment method;
- pickup address;
- destination address;
- comments or notes associated with a ride.

Workday Information

The application may also store:

- workday date;
- start time;
- end time;
- workday status;
- notes associated with the workday.

5. Local Storage

Information entered into TaxiGo is primarily stored **locally on the user's device**, using the application's local database and preferences.

TaxiGo does not automatically transmit the user's complete ride history to a TaxiGo server.

Local data can be deleted using the application's available data deletion features or by clearing the application's data through Android settings.

6. Address Search

TaxiGo provides address search and autocomplete functionality.

When a user searches for an address, the entered search query may be sent to third-party services in order to provide address suggestions.

TaxiGo may use:

- the **Base Adresse Nationale (BAN)** for address searches in France;
- **Photon**, using data including OpenStreetMap data, as a complementary service.

An address search query may contain part or all of an address entered by the user.

TaxiGo does not currently request Android GPS location permission. Therefore, using the address search feature does not automatically give TaxiGo access to the user's physical location.

Third-party services may process search requests according to their own privacy policies and terms of service.

7. Address History

TaxiGo may locally use previously entered addresses to provide faster suggestions.

This address history is stored locally within the application and is not sent to a TaxiGo server to create a user profile.

8. Exports and Backups

TaxiGo allows users to export certain information, including:

- JSON files;
- CSV files;
- PDF reports.

Exported files may contain information related to rides, workdays, amounts, addresses, notes, and, depending on the export, application settings.

Exported files are temporarily handled by the application before being shared or saved according to the action selected by the user.

Users are responsible for the destination of files they choose to save or share.

For example, if a user shares a report by email, the file and its contents are transmitted to the email provider or recipient selected by the user.

TaxiGo does not control how third-party services subsequently process these files.

9. Data Sharing

TaxiGo does not sell users' personal data.

TaxiGo does not automatically share ride history with advertisers or data brokers.

However, certain information may be transmitted to third-party services when necessary for a feature requested by the user.

This may include:

Address Search Services

An address search query may be sent to third-party address search services used by TaxiGo to provide suggestions.

Sharing Applications

When a user uses Android's sharing functionality, selected information or files may be transmitted to the application chosen by the user, such as an email or messaging application.

Any subsequent processing performed by that application is governed by the third party's own privacy policy.

10. Financial Information

TaxiGo allows users to record **amounts associated with rides** and the selected payment method.

TaxiGo does not currently process credit card numbers, card security codes, or bank account credentials.

Selecting "card" as a payment method does not give TaxiGo access to the customer's bank card information.

11. Location Data

TaxiGo does not currently request Android location permission and does not directly access the device's GPS location.

However, addresses voluntarily entered by the user in a ride or address search may constitute location-related information.

Such information is processed according to the functionality described in this Privacy Policy.

12. Artificial Intelligence

The current version of TaxiGo may include software components that allow integration with artificial intelligence services.

Any AI functionality actually enabled in a distributed version of TaxiGo will process information in accordance with this Privacy Policy.

Ride data is not intended to be sent to an AI service unless a specific application feature requires such processing and the processing is clearly communicated to the user.

If a future version of TaxiGo introduces AI-based processing of user data, this Privacy Policy will be updated to reflect that change.

13. Advertising

The current version of TaxiGo is not designed to display personalized advertising.

TaxiGo does not sell personal information for advertising purposes.

If advertising services are introduced in a future version, this Privacy Policy and the Google Play Data Safety information will be updated accordingly.

14. Security

We take reasonable measures to protect information processed by the application.

Activity data is stored locally and is not automatically transmitted to a TaxiGo server.

Communications with external services used for address searches are performed using secure network connections where supported by the relevant service.

However, no computer system or Internet transmission can be guaranteed to be completely secure.

Users should also protect their devices using appropriate Android security features, such as a screen lock.

15. Android Backup

Depending on the device and Android configuration, certain application data may be included in Android's backup mechanisms.

These backups may be associated with the backup services configured on the user's device.

TaxiGo does not control Android's backup mechanisms or the services associated with the user's Android account.

Users can manage Android backup settings through their device settings.

16. Data Retention

Data stored locally by TaxiGo is retained for as long as the user chooses to keep it.

Users can delete their data using the deletion functionality provided within the application.

Users may also clear the application's data through Android settings or uninstall the application.

Exported files stored outside the application, such as files saved to cloud storage, email accounts, or other services, may remain after TaxiGo data has been deleted.

Users are responsible for deleting those external copies from the relevant services.

Third-party address search services may retain certain search requests according to their own privacy policies and retention practices.

17. Data Deletion

TaxiGo currently does not require a user account, so there is no separate account deletion procedure.

Users can delete their TaxiGo data using the "**Clear All Data**" functionality available within the application.

This functionality deletes activity data stored locally by TaxiGo.

Users can also clear application data through Android settings.

Copies of exported or shared files stored outside TaxiGo must be deleted separately by the user from the relevant service.

18. User Rights

Depending on applicable data protection laws, including laws applicable within the European Union, users may have rights concerning their personal data, including:

- the right to access their data;
- the right to correct inaccurate data;
- the right to request deletion;
- the right to request restriction of processing;
- the right to object to processing where applicable;
- the right to data portability where applicable.

When information is stored only locally within the application, users can generally view, modify, or delete it directly through TaxiGo.

For questions or requests concerning personal data, users can contact:

ibrahim.y.diawara@gmail.com

19. Children's Privacy

TaxiGo is not specifically intended for children.

The application is intended for users who are able to engage in professional taxi-driving activities.

We do not knowingly seek to collect personal information from children.

20. Third-Party Services

TaxiGo may communicate certain information to third-party services when required for specific functionality, including address search services or when the user explicitly chooses to share a file or report.

Third-party services have their own terms of service and privacy policies.

Users are encouraged to review the privacy policies of those services to understand how they process information.

21. Changes to This Privacy Policy

This Privacy Policy may be updated when TaxiGo changes, including when:

- a new feature is introduced;
- a third-party service is added or changed;
- the types of information processed change;
- applicable legal or regulatory requirements change.

The "Last updated" date at the top of this page will be updated whenever significant changes are made.

Users are encouraged to review this Privacy Policy periodically.

22. Contact

For any questions regarding this Privacy Policy or the processing of data by TaxiGo:
